

MIKE ASHEY PRODUCTIONS

**1/350 SCALE USS PETERSON
MANUFACTURER : DML
MODEL BUILT BY : MIKE ASHEY**

KIT DESCRIPTION AND BUILDING NOTES

This 1/350 scale DML modern sea powers ship model was built out of the box except for the propeller shafts which are brass rod. The photoetch details are from a Gold Medal Models photoetch detail set which really enhanced the appearance of this model. The models hull and deck went together without any problems and the superstructure was a box type construction process with four sides and top. This type of construction requires a different approach in that you have to be sure that the finished assembly is square and fits properly. I have found that the best approach is to assemble the superstructure parts with masking tape, make adjustments as necessary and then spot glue the parts together with tiny drops of super glue. Once the glue has set I add more glue to the seams to add strength to the assembly. The model was painted with Testors model master enamel paints
